

**Tasty! I would die to get some of them !
that's what you're probably thinking right now. Let's just
learn a few things about chicken nuggets together...**

**60% of combined chicken meat
(made of chicken (17%), turkey(10%), skin, cereal flour,
preservative and water).**

**Only 27% actually is chicken meat
but what part of the body ?
obviously the cheaper part
carcass, skin, organ tissues and fat.**

14% of Salt

13% of fat (6% are saturated fat)

**What compose the 40% left ?
Water, vegetal oil, chemical products such as
additives, food coloring and flavors.**

**The Chicken are killed
in a big factory by machines without
ever been outside.**

**The carcass (bones, skin, giblets...) is
blend to get a mixture that will become
chicken nuggets.**

**It has been scientifically proved that
conservatives and saturated fat are really bad
for your health.**

Would you still die for it ?

FOOD MADE WITH LOVE IS BETTER

Do you prefer

Food made with animals
bred in battery in inhumane
sanitary conditions and cooked
in factories just as we
make objects ?

→ **PROCESSED FOOD**

Or Do you prefer

Food made with animals bred in
the open air by people who loves them
and fed them with healthy food,
like for their vegetables without
bad fertilizers ?

→ **HEALTHY FOOD**

I have ALREADY choose
